Apache php file instead of display

Apache php files. Php file displays as text.

Make sure the PHP midde is on the list and without comfort within the HTTPD of your Apache. To clarify, an "open label" is how it is the PHP files locally? Can Apache2 execute PHP? Why are Haccess used? Taking into account that this is a very easy solution, there is no reason to avoid working with PHP and Apache 2. Pass the PHP code to execute directly in the command line. Thank you for your assistance. So there is another possible cause: if you have something like a .htaccess file of your web content folder, you can make your PHP scripts stop working. WE DO THAT WITH THIS CODE: Now we can use the command to add data to our file. Why are the PHP files not analyzed in Apache? I also have this problem... the servers as a librer break, such as pressing the Enter or Return key on the keyboard. Make sure the Apache HTTPD. Why are PHP files downloaded instead of running in Nginx? Download.php. Currently, you are configured in W, which means only writing, beginning of the file. But, how do you fix it? When writing in a file, the first thing to do is open the file. Provide the PHP cup to execute through the entrance to the entrance (Stdin). Control-x, control-s. The PHP file is the website skeleton. First, be sure to save your PHP files in UTF-8. Here is an example:
